

AvaSpec-NIR256/512-2.5-HSC-EVO

NIRline Near-infrared Spectrometer

AvaSpec-NIR256-2.5-HSC-EVO

The NIR spectrometers in our EVO series offer more sensitivity, low weight and small size. They are based on a 100 mm optical bench with an NA of 0.13, offering optimal balance between resolution and sensitivity.

The 2.5-HSC series feature 256 or 512 pixel InGaAs detectors and are available in multiple configurations. These instruments are perfect for analyzing grain, corn, wheat, soya, polymers, but also for medical uses, process monitoring and other analyses.

The 256 pixel detectors offer the best sensitivity for most applications.

For applications where resolution is key or more datapoints for modelling are required, the 512 pixel detector will be the best choice.

Also available on the -HSC is the user selectable gain-setting mode: LN (lownoise, standard setting), which gives you a longer integration time and higher signal to noise ratio, and HS mode (high-sensitivity) for measuring in low light conditions. Analog and digital IO ports enable external triggering and control of shuttered and pulsed light sources from the AvaLight series.
