Levante Emerald ps
UV to IR, picosecond Generation

Overview

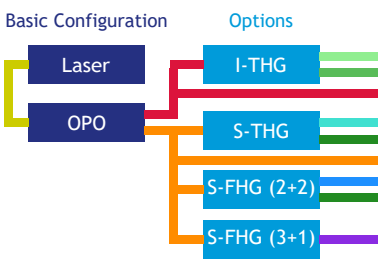

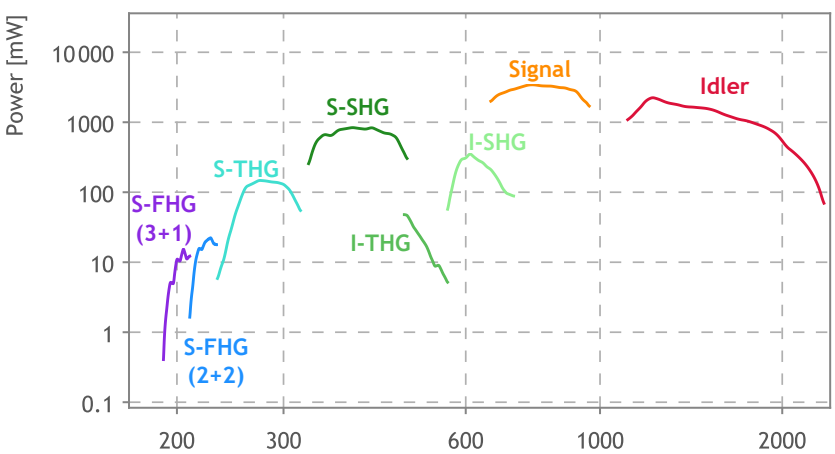

The Levante Emerald ps is a synchronously pumped, tunable OPO with high conversion efficiency generating 660 nm to 2300 nm wavelength range. It is driven by green (SHG of 1 µm) mode-locked picosecond lasers. Depending on the pump laser it provides 2 ps to 12 ps pulses with a 1.5 cm^{-1} to 10 cm^{-1} bandwidth at Watt-level Signal/Idler output power.

With optional harmonic generators for Signal and Idler extending down to the 4th harmonic, systems can be configured from 190 nm to 2300 nm. It is ideal for quantum dot research, metrology, coherent Raman microscopy and fluorescence lifetime imaging.

Example Configuration

Typical Tuning Curve

At a Glance

- Perfectly synchronized output pulses
- Available with different pulse widths and bandwidths
- Integrated spectrometer for precise wavelength tuning and stabilization
- Fully computer-controlled with automated wavelength tuning

Applications

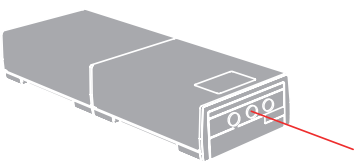

- Quantum dot research
- Metrology
- Coherent Raman microscopy (CARS, SRS)
- Fluorescence life time imaging (FLIM)
- Time-correlated single-photon counting (TCSPC)
- Laser-based Angle-Resolved Photoemission Spectroscopy (Laser-ARPES)
